

How To Use

User Guide & API Usage Reference

FinClaw — AI-Assisted Paper Trading Dashboard

1. Project Overview

FinClaw provides a browser-based dashboard for AI-assisted paper trading. This guide explains how to register, navigate the UI, interact with the AI agent, submit trade intents, and use the API directly.

2. Getting Started

Step 1 — Open the app

Navigate to: `http://127.0.0.1:3000/login.html`

Step 2 — Register (Onboarding)

- Enter your email and a password (min 8 characters)
- Select your investment goal (e.g. growth)
- Select experience level (e.g. novice)
- Select risk tolerance (e.g. medium)
- Select asset class (e.g. stocks)
- Click Onboard

Step 3 — Log In

Enter your email and password, click Login. You are redirected to the dashboard.

3. Dashboard Navigation

Section	What It Shows
Dashboard	Balance, market status, agent action widget, portfolio chart, recent trades, safety policies
Portfolio	All holdings with shares, value, and daily change %
Trade History	Full trade log with asset, type, amount, date, AI flag
Settings	Automation level, notifications, theme

4. Key UI Features

Beginner Mode

Toggle in the sidebar footer. When ON: tooltips appear on hover, plain-language explanations are shown throughout the dashboard.

Agent Action Widget

- Shows the AI agent's current suggested trade
- Click "Allow Buy" to approve or "Reject" to block
- Status updates to confirmed or rejected state

Agent Instructions Panel

- Lists all active trading rules the agent follows
- Type a new rule in the input box and click "Add Rule"

- Rules are saved to localStorage

AI Chat Assistant

- Click the orange bot button (bottom-right corner)
- Type any question about your portfolio or trades
- Use quick suggestion buttons for common queries
- Chat calls POST /api/chat and falls back to static responses if API is unavailable

5. API Usage

Authentication

```
POST /api/auth/onboarding
{"email":"user@example.com","password":"secret123",
 "goal":"growth","experience":"novice","risk":"medium","asset":"stocks"}
POST /api/auth/login
{"email":"user@example.com","password":"secret123"}
```

Submit a Trade Intent

```
POST /api/trade-intents
{
  "user_email": "user@example.com",
  "ticker": "AAPL",
  "side": "buy",
  "notional_usd": 50.0,
  "reason": "Momentum signal detected",
  "source": "frontend"
}
```

AI Chat

```
POST /api/chat
{"message": "How is my portfolio performing?"}
Response: {"ok": true, "reply": "Your portfolio is up today..."}
```

Automation Agent

```
POST /api/agent/configure
{"user_email":"agent@trading.ai","tickers":["AAPL","NVDA"],"loop_interval_seconds":30}
POST /api/agent/start
POST /api/agent/stop
POST /api/agent/run-once
GET /api/agent/status
```

6. Trade Validation Rules

Rule	Value (default)
Approved tickers	AAPL, MSFT, NVDA, GOOGL, BTCUSD, ETHUSD
Max order notional	\$100 USD
Max daily trades	3 per user

7. Inputs & Outputs Summary

Endpoint	Input	Output
/api/auth/login	email, password	user profile object
/api/dashboard/{email}	email (path)	balance, holdings, trades
/api/trade-intents	ticker, side, notional_usd	trade_id, broker_result, reason

/api/chat	message string	reply string
/api/agent/status	none	agent state + last 20 logs
